COURSE OVERVIEW

Use the power of video to document crime scenes!

Video is a fast—and extremely effective—way to document evidence at a crime scene. This virtual session explores the use of camcorders, DSLRs, and mirrorless cameras and associated technology to document traffic accidents, vehicle searches, indoor and outdoor crime scenes, search warrants, and other types of controlled-action video evidence. Students will learn how to use the Elements of Video Continuity to establish their location, safely document the scene itself, the position of all evidence found, and uniquely identifying details about each piece of evidence.

An overview of Alternate Light Sources and barrier filters will familiarize students with recording trace evidence of street drugs and human serology. Macro videography (extreme close-up shots) and scale rulers are emphasized heavily for recording extremely fine details.

WHO SHOULD ATTEND

This course is ideal for military, law enforcement, and public safety professionals, evidence technicians, jail and correctional facility employees, school and campus security personnel.

WEBINAR TOPICS

- How to make video equipment a force multiplier
- Choosing video cameras and gear to record crime scenes
- Documenting crime scenes, homicides, search warrants, seizures, highway interdictions, and drug lab assessments
- Proper use of automatic and manual focus
- Best practices for audio with crime scene video
- Recording video with an Alternate Light Source (ALS)
